To whom it may concern;

RADTriage - Letter of Recommendation

PrevenTech ltd. has recently finished a successful purchase order of several thousands of RADTriage personal dosimeters supplied to the Israeli Ministry of Defense. This purchase order is the result of a long process of evaluation in which the Israeli government extensively tested and examined RADTriage and was convinced of its compatibility with the Israeli defense requirements. The Israeli stock of RADTriage is currently being distributed to first responders, i.e., police, fire brigades, ambulance services etc., for their use in radiological emergencies.

Similarly to the Israeli government, PrevenTech ltd. has great trust in the SIRAD (Self Indicating Radiation Alert Dosimeters) series, and in particular RADTriage. Developed to provide precision, RADTriage is an example of a product that is both simple and genius. It provides immediate, on-the-spot indication of any acute exposure to ionizing radiation as well as long-term assessment of exposure to low levels of radiation that can accumulate into a dangerous dose.

In addition, some of the main features of RADTriage, which are favorable with customers, are its simplicity of use, the passive nature of its operation (no batteries needed) and the compact size. These features, among others, place RADTriage in advantage in comparison to other solutions and therefore more favorable for procurement in large quantities.

PrevenTech

We had the opportunity of introducing RADTriage in several international exhibitions and have always encountered interest in the product by different officials and customers. The product was also sold to the Israeli port authority of Ashdod, which utilizes it to assess its employees' exposure to radiation threat. The applications of the product are indeed numerous and its market potential is wide.

For all of the above reasons and more we happily recommend RADTriage to anyone considering procurement of a radiation-safety dosimeter. We are confident that users of RADTriage can benefit greatly from using this device.

We will be happy to answer additional questions as needed.

Sincerely yours,

Dr. Guy Robin, CEO
